IN 1 STEP

- SPECIAL BLEND OF NON-ABRASIVE CLEANERS AND POLYMERS
- CLEANS, POLISHES, AND PROTECTS IN 1 EASY STEP
- REVITALIZE AND PROTECT ANY PLASTIC HEAD OR TAIL LAMP
- CLEAN EMERGENCY VEHICLE LIGHTS AND PLASTIC WINDOWS

Today's headlights are manufactured of polycarbonate plastic for strength and the ability to conform to the front-end styling of a vehicle. Although polycarbonate is a very hard porous plastic the intense sun and heat, road chemicals, humidity, insects, bird droppings and acid rain combined with the heat of the halogen bulb will, in as little as 1 year, damage the protective hard coat to the point that a ugly discolored, cloudy, hazy appearance develops on the lenses. This damage will restrict the headlights ability to project its beam of light at night and during adverse weather conditions by as much as 90%.

HLR is a simple 1 step process that will restore clarity and illumination. **HLR** has a protective barrier coating to prevent further headlamp discoloration. Also for use on emergency vehicle lights and other plastic surfaces.

Apply **HLR** with a plastic scrub pad or using a buffer with a heavy cutting pad. Apply – rub/buff – wipe! It's as easy as that!

- 40303 HLR (Headlamp Restorer — quart
- 40304 HLR (Headlamp Restorer — gallon
- 83201 DO-ALL Plastic Scrub Pad for manual cleaning
- 84209 EDGE Yellow Wool Cutting Pad for buffer
